

The A320 SR FSTD includes everything needed for a turnkey solution, without budget surprises. It has been developed by our engineering team, looking for a comprehensive solution. Both hardware and software simulates precisely the training inside a A320 aircraft type.

It is designed and built using only high quality, durable components, especially in the avionics, seats and flight controls.

### CHARACTERISTICS

- ✓ 100% Replica of the actual cockpit of the plane.
- ✓ The design for all the simulator components features the highest quality materials, providing the simulator with a great durability. Designed to be operated 24/7.
- ✓ Navigation databases can be updated via the subscription to NAVIGRAPH™. It is possible to load photorealistic scenes of areas and airports.
- ✓ Avionics on a 1: 1 scale, fully functional and backlit.
- ✓ Visual system 180°x40° FULL HD.
- ✓ Dual MCDU with updatable global databases (NAVIGRAPH).
- ✓ Fully configurable weather and environmental conditions.
- ✓ Connectivity for remote maintenance.
- ✓ Simloc A320 SR certifiable suite.
- ✓ Motorized throttle in aeronautical aluminum for intensive use.
- ✓ Replica seats with the original movements and designed for an intensive use. Adjustments are only mechanical, not electrical.
- ✓ Fly by wire sidesticks with flight control laws (normal, alternate, and direct).
- ✓ Interconnected adjustable pedals and designed for an intensive use.
- ✓ Complete simulation of the airplane systems, ECAM actions (abnormal and emergency procedures) hydraulics, pneumatics, outfitting, motors, etc.
- ✓ Instructor station with a full range of options and an easy and intuitive interface. It features a wide variety of failures, and the possibility of activating several simultaneously. Possibility of implementation of failures at the request of the customer.
- ✓ Modular system to optimize transport processes, search and repair of failures, self-check system and calibration to facilitate maintenance tasks.
